

Cooling demand Swiss

Read up on the internet

Retrofit due to global warming.

In no other country in the world is the need for cooling increasing as it is in Swiss.

Researchers have investigated how much additional cooling will be necessary in Swiss in the future.

Conclusion: We are dangerously ill-prepared.

This is primarily due to irresponsible politicians and architects with amputated brains. Just look at the buildings of the last 20 years.

- Poorly insulated flat roofs instead of optimally insulated gable roofs.
 - Flat roofs without an overhang instead of gable roofs with an overhang that provides shade.
 - Lack of solar panels to support domestic hot water heat pumps.
 - Lack of solar panels to support air conditioners with high power demands.
 - Windows on the outside instead of inset windows with a canopy.
 - Poorly insulated exterior fronts instead of optimally insulated double exterior fronts.
 - Oversized heaters instead of switchable heat-cold pumps.
 - In the living area integrated kitchens instead of separate well-ventilated kitchens.
 - Room heights of only 2.3 meters instead of at least 3 to 4 meters as in Italy.
 - Rooms with far too many south-facing windows instead of roof fans.
 - Super inert underfloor heating instead of low-temperature radiators with bare tubes.
 - Far too small cellars, which are not completely below ground level.
- And, and, and, and, and, and, and, and, and, and, and, and, and, and, and, and, and, and, and, and!

Irresponsible politicians together with architects who have had their brains amputated, only speak of housing densification instead of more shady trees and a strict limitation of the population, which has doubled in Switzerland in 70 years. Keep it up, then in a few years Switzerland will look like the countless metropolises in the Far East, unbearable heat, coupled with smog and climate-related deaths on every corner, which numerically tops the list of deaths as a result of cancer, smoking, obesity, HIV, etc. will be left out in the cold.

And what are our overpaid federal councilors (ministers) doing while the climate is going down the drain? Did Ueli Maurer mess up the possible rescue of the second largest Swiss bank, Cr dit Suisse? It would not have come to that if Ueli Maurer had acted differently. As early as November 2022, it became apparent that the bank was in serious trouble. With billions of francs a day, outflows of customer money had reached an alarming level. According to the "Sunday Newspaper", the then Minister of Finance, Ueli Maurer, had it in his hands to avert the takeover of the bank. But Ueli Maurer *didn't feel like it* at all and preferred to watch football, where Switzerland played against Brazil at the World Cup, and handed the dossier over to his successor Karin Keller-Sutter.
